INTRODUCTION

Onnittelumme oneQ WOK BURNER -grillin hankinnan johdosta!

oneQ on valmistettu tuottamaan sinulle grillausiloa vuosiksi eteenpäin. Olemme täyttäneet korkeimmat vaatimukset laadun ja turvallisuuden kannalta.

oneQ polttimessa on erittäin puhdas palaminen ja optimaalinen ilmavirta. Polttimen komponentit on valmistettu korkeaa kuumuutta kestävästä ruostumattomasta korroosiota kestävästä teräksestä.

Kun grilliä käytetään ja huolletaan asianmukaisesti toimii se turvallisesti ja luotettavasti vuosia. Lue kaikki ohjeet huolellisesti ennen grillin asennusta ja käyttöä, jotta olet tietoinen kaikista grilliä koskevista tärkeistä seikoista.

Lisätietoa löytyy www.one-q.com.

INLEDNING

Grattis till att köpa din OneQ WOK BURNER!

OneQ är gjord för att ge dig grillfunktioner i flera år.

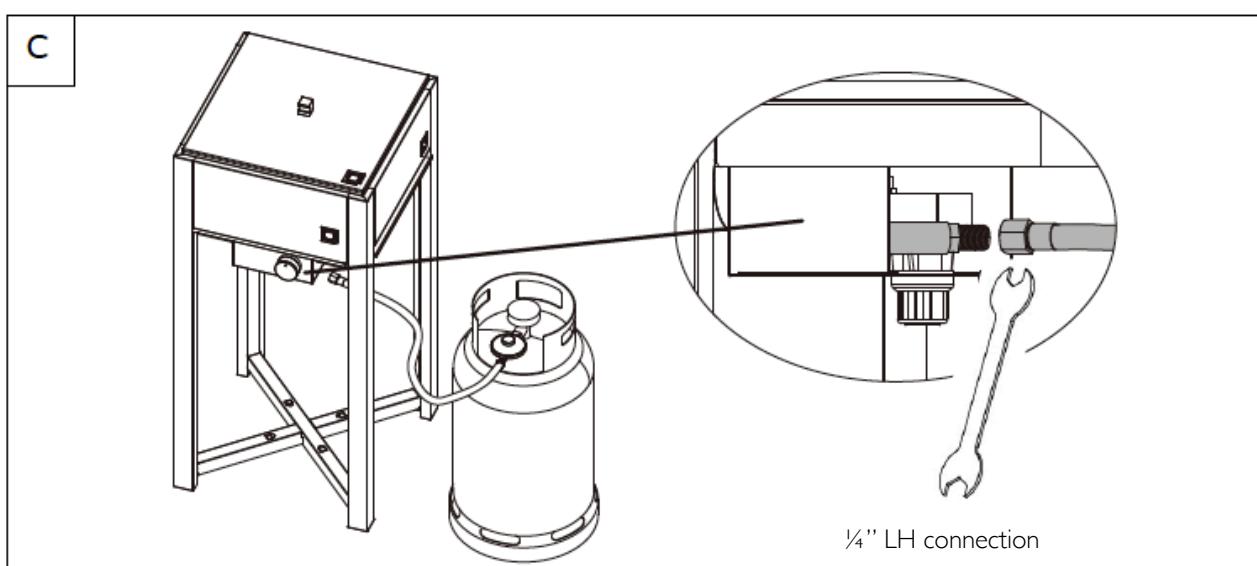

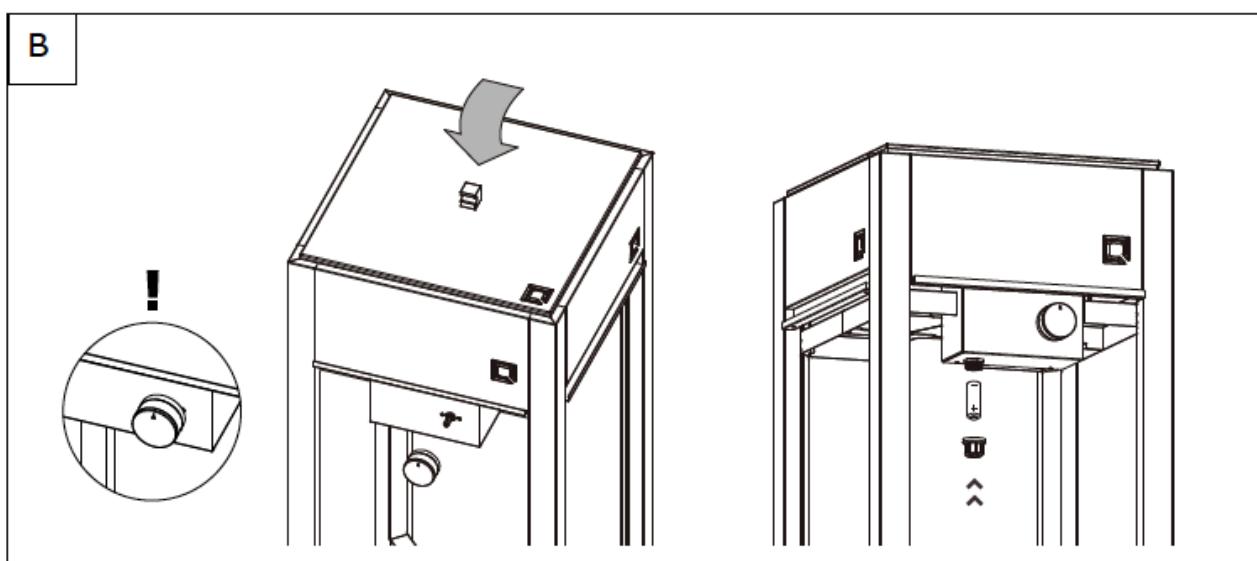

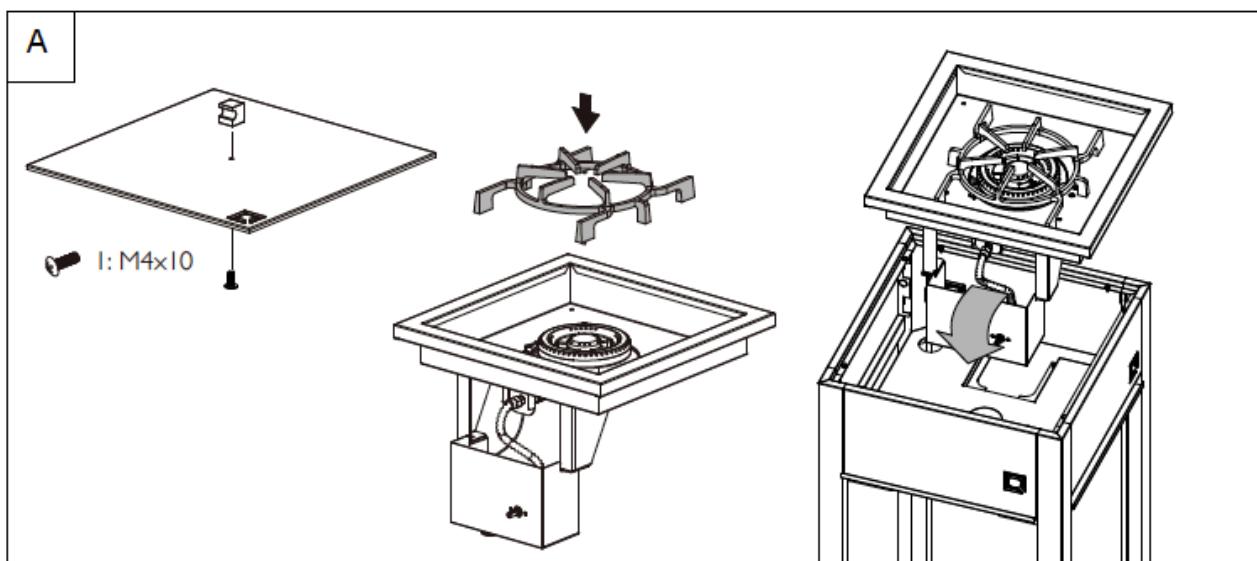

Högsta krav ställs på komfort och säkerhet.

OneQ gasbrännaren har extremt ren förbränning och optimal luftflöde. Brännarkomponenterna är gjorda av värmeständigt rostfritt stål och är optimalt resistenta mot korrosion.

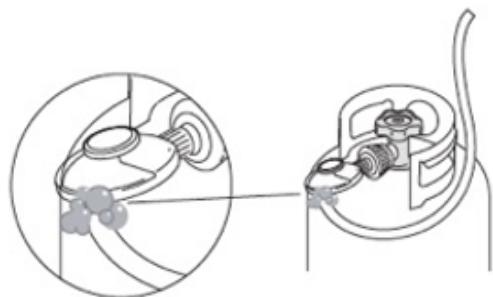

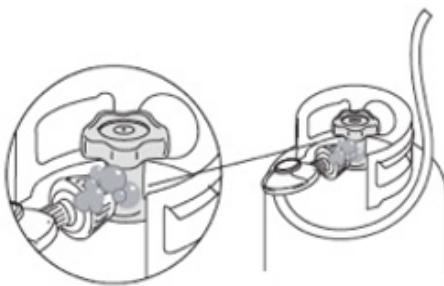

Om grillen används och underhålls korrekt fungerar den på ett säkert och tillförlitligt sätt i flera år. Läs igenom bruksanvisningen noga innan du använder eller installerar grillen så att du är medveten om alla viktiga funktioner.

Om du är intresserad av att utöka nya produkter eller utöka din OneQ-uppsättning, besök www.one-q.com eller sök oss på Facebook.

oneQ LEGS:

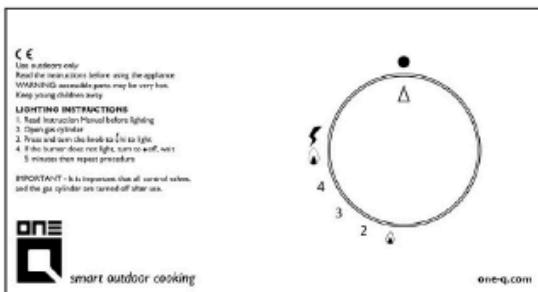

Check for leaks by wetting the connections with the soap and water solution and watching for bubbles. If bubbles form or if a bubble grows, there is a leak.

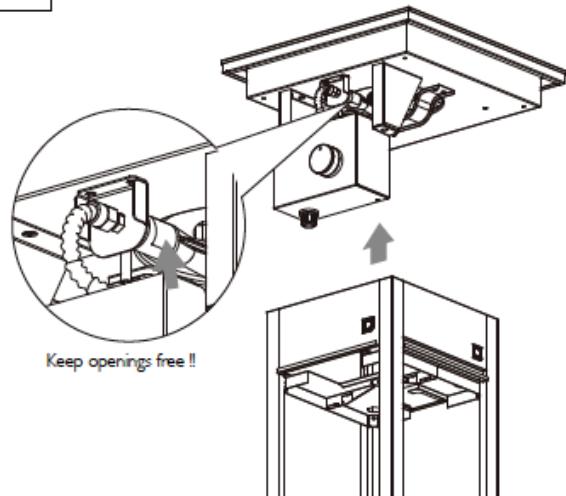

WARNING If there is a leak, TURN OFF the gas and DO NOT OPERATE THE GRILL. Contact your local dealer or oneQ (support@one-q.com).

THE BURNER
WITH THE LID ON**

WOK AND SIDE BURNER ASSEMBLY TO oneQ LEGS

The burner hangs loose in the slot of the stand. Choose an accessible place for you to install the controls in the preparation of the burner.

- ➲ figure A Carefully release the wok and side burner in the slot of the stand.
- ➲ figure B Place the wok burner lid, knob and battery into the appliance.

CONNECTION GAS BOTTLE

The oneQ gasburner is suitable for both propane and propane / butane (gas). We advise you to use standard 5 or 10 kg cylinders. Use a regulator that matches the pressure indicated on the date plate (EN16129).

- ➲ figure C Place the cylinder on ground, then attach the hose to the gas tap by turning/ tighten the nut.
The valve has a standard 1/4" LH connection.

OPERATION AND FIRST USE

The appliance is fully assembled and properly adjusted at the delivery by the manufacturer. In the first use of the wok and side burner it is important that you completely remove all packaging materials.

- ➲ figure D Press the control knob and turn it to the left to the ignition position until the burners are burning completely.

Depending on the type of gas and gas pressure the oneQ burner has a load of 6,5kW. The burnerpower can be adjusted with the knob.

TROUBLESHOOTING

Failures	Possible Cause	Solution
Burner will not ignite or does not burn completely.	- ignitionpin dirty - cylinder (almost) empty - hose kinked - restriction air intake manifold - burner tubes are wet (after cleaning) - Defective pressure regulator	clean pin replace cylinder remove kink release air intake leave to dry replace

- ➲ figure E The air intake at the bottom of the manifold should have an unobstructed air input. If there is dirt in it you should remove it.

If the problem remains unresolved then contact your oneQ supplier.

CLEANING & MAINTENANCE

We recommend cleaning the burner after each use. Check all areas where oil, grease or food residue may accumulate, then you keep all parts in optimal condition.

SERVICE, WARRANTY AND CERTIFICATIONS

If you have problems with your oneQ wok and side burner or if you want to order (reserve) parts, contact your dealer or see www.one-q.com, where you find an extensive customer service section.

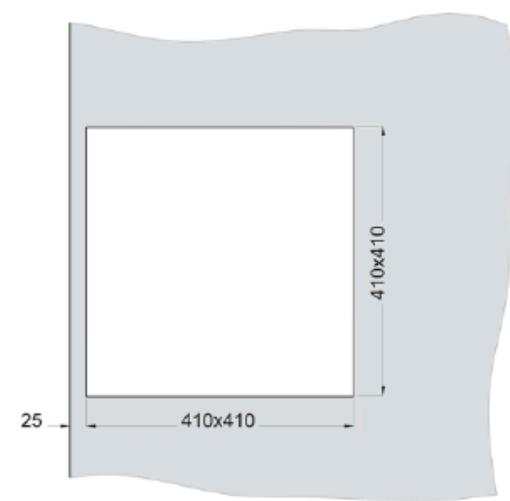

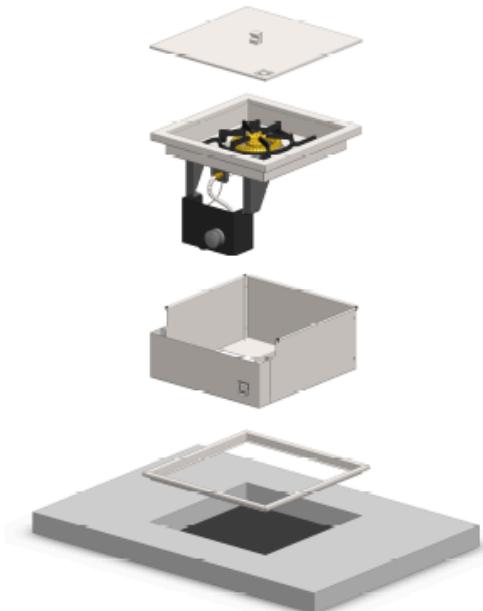

The oneQ wok and side burner measures up to the NEN-EN 484 standard for wok burner and is certified by the world-renowned KIWA GASTEC testing station for gas appliances.

SAFETY MEASURES AND WARNINGS

- This wok and side burner uses inflammable gas and creates excessive heat. Therefore, it is very important that you follow all the safety instructions consistently, to prevent risk, damage or accidents.
- The top bench of the wok and side burner are extremely hot during use. Contact while in use may cause burns to body, clothes or other sensitive materials. Also, after using these parts stay hot for a long time. Use heat resistant gloves like oven mitts.
- Make sure you wear fire resistant clothes while using the barbecue. Some synthetic materials are very fire sensitive and should not be worn. Do not wear loose clothes or clothes that blow away easily if they can catch fire unexpectedly.
- Only use this appliance outdoors. Never use the wok and side burner in confined spaces like a garage, barn nor other kind of building. Never use the appliance in or on recreational vehicles or boats.
- Use a firm flat surface where the appliance stands stable and at state level as much as possible. Do not move the appliance while using.
- Make sure there are no children playing, sitting or standing around the wok and side burner.
- Do never cover up the (gas)burner with something like a plate or foil during use. Also never cover up the air holes in the burner. This will cause not enough air flow and a foul burning of gas which can cause the release of toxic gases like Carbon monoxide (CO). In case you want to cover the food while using the barbecue you must only use the suitable (optional) cover, this ensures proper airflow.
- Do not heat up any unopened cans because the accumulated pressure can lead to bursting of the cans.
- Keep the burner away from flammable materials. Grease is flammable. Let hot grease cool down before you remove it.

USAGE

- Execute each time you start using the wok and side burner or at any replacement of the gas cylinder the "no leakage test". If there is any suspicion of gas leaks, turn the gas knob Off and close the tap on the gas cylinder. Make sure you have your equipment checked at your authorized dealer or certified gas fitter.
- Inspect the gas hose each time before using the barbecue. Make sure that it is not kinked. If there is extensive wear or damage to the hose you should replace it. Do not use a hose that is longer than 1.50 meters. Refer to the local national standards that apply, these may differ.
- The output pressure of the pressure regulator should match the pressure that is listed on the date plate of the wok and side burner.
- Never use a dented or rusted gas cylinder or a cylinder with a damaged valve. Store cylinders always upright (even empty ones). Buy or lease a new cylinder always at an authorized company as a camping store.
- Ensure that during the changing of the cylinder no ignition sources are near the cylinder. Place the gas cylinder always at the appropriate cross between the appropriate cams.
- Only clean the parts when they are cooled down appropriately. Some cleaners produce unhealthy fumes or ignite even if they are used on a hot surface. Make sure the wok and side burner is not operating during cleaning.
- If you notice a gas leak or lack of operation of the barbecue, turn the gas off and do not use the appliance anymore. Contact your oneQ dealer and let him/her check the wok and side burner for defects.
- Authorized companies in your country must carry out repair- or replacement work on the (gas) burner and gas components. In this work, the local standards and regulations concerning liquid gas appliances are to be complied to. You may never do this unless otherwise noted in this guide. Yourself. In case you deviate from this, you will create major risks and any kind of warranty will be revoked.

- Always close the tap on the gas cylinder when you no longer use the barbecue.
- Applying modifications to the equipment is dangerous and prohibited.
- The manufacturer can not be held responsible for accidents, injury or damage caused by unappropriate use of oneQ wok and side burner.
- Always use a certified flexible tube that is suitable for Propane/Butane and not longer than 150cm. Your dealer can supply it to you.
- Vent openings in the container compartment and on the appliance should not be obstructed in any way.
- Check all vent openings and access to the venturi of the appliance before every use and remove any dirt or any blockages.

STORAGE

When storing the appliance for extended periods, be certain all controls and cylinder valves are turned off. Gas cylinders must be stored outdoors, out of reach of children and must not be stored in a building, garage or any other enclosed area. The gas cylinder supply valve must be turned off when the appliance is not in use.

VENTILATION

When building the appliance in a confined space, make sure 2 opposite openings (top/bottom, top-back/top-front, top-left/top-right) of at least 20x3cm are applied for proper ventilation for the appliance to function.

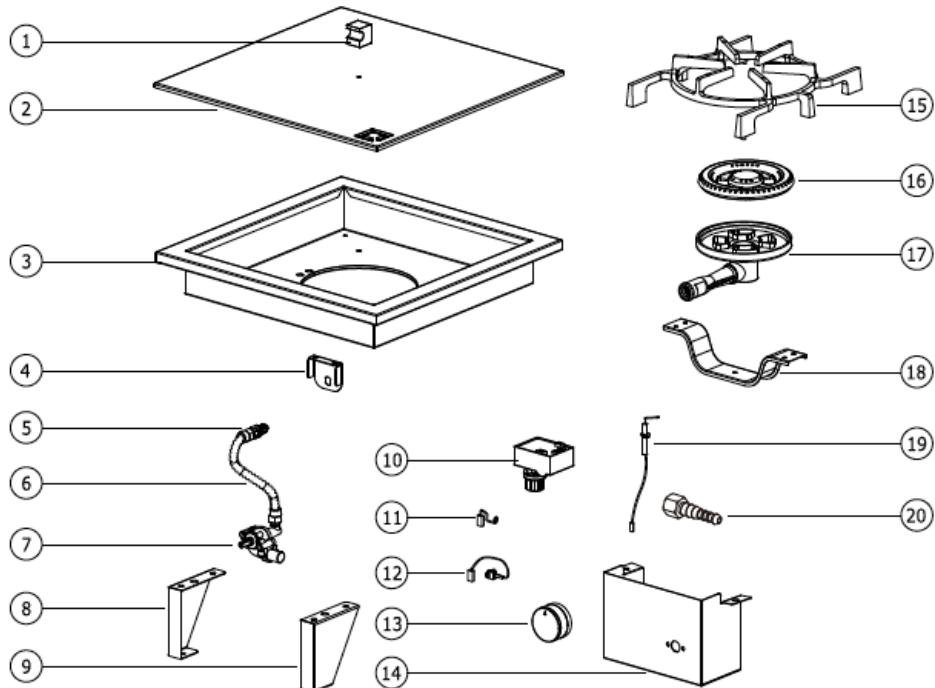

For installations having enclosed cabinetry, low level venting must be installed. This is to allow the gas which is heavier than air to escape from the enclosure in the situation where there may be a leak. A minimum opening of 200cm² is required.

POSITION OF THE GAS CYLINDER

Do not place a gas tank directly below the appliance when using hot liquids that may leak onto the gas tank.
